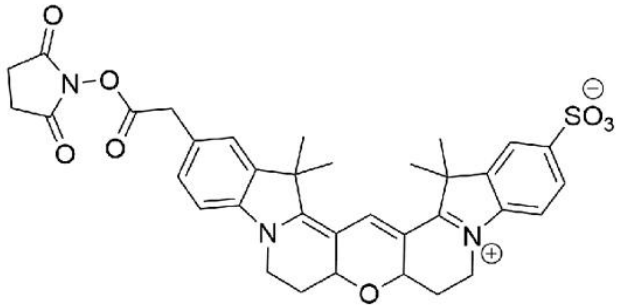
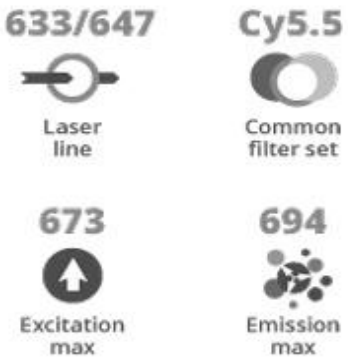
CY3B NHS ESTER

SKU: FP-1831



Description



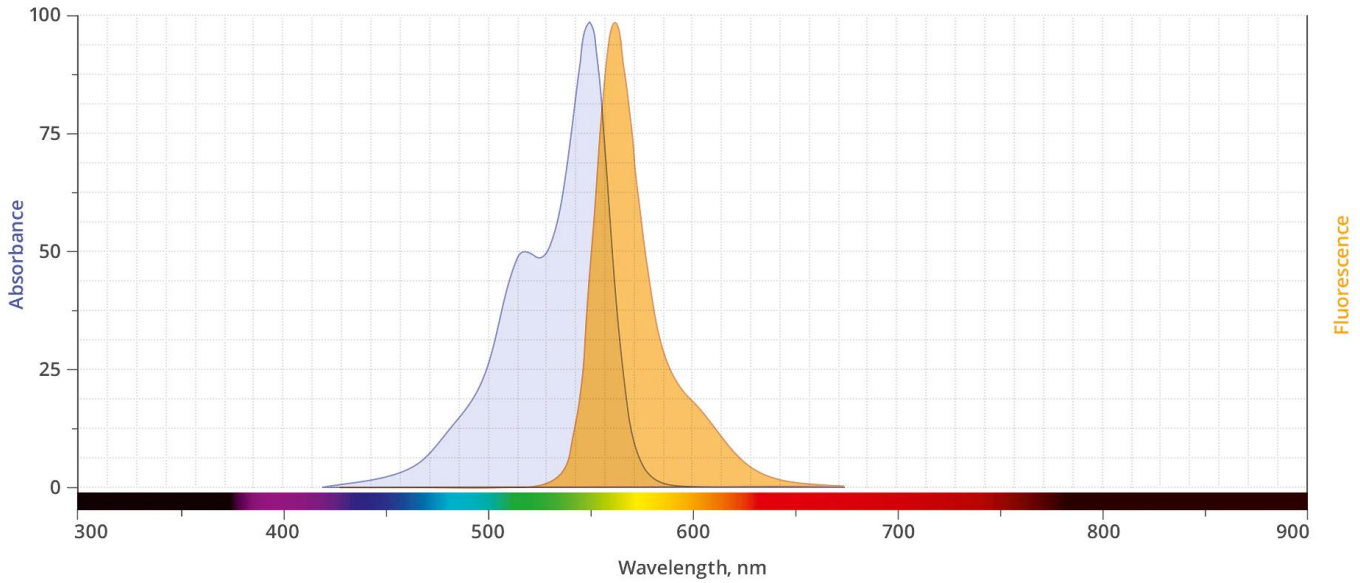
Cy3B NHS Ester is an improved version of Cy3 dyes with significantly increased fluorescence quantum yield and photostability.Cy3B Dye is a bright, water-soluble, and pH insensitive from pH 4 to pH 10 orange-fluorescent dye. Cy3B conjugates of antibodies, peptides, and proteins can be excited using the 532 nm or 555 nm laser line and visualized with TRITC (tetramethylrhodamine) filter sets. Cy3 conjugates give less background than TAMRA and most other commonly used fluorescent dyes.

The NHS ester (or succinimidyl ester) is the most popular amine reactive group for labeling with the primary amines of proteins (Lys), amine-modified oligonucleotides, and other amine-containing molecules. Cy3 NHS ester is not recommended for labeling proteins at high molar ration due significant self-quenching, and only recommended for detection of moderate-to-high abundance targets. For detection of low-abundance biological targets we recommend

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.

using AZDye 555 NHS Ester (Alexa Fluor ® 555 analog), which can be attached to proteins at high molar ratios without significant self-quenching, enabling brighter conjugates and more sensitive detection.

Abs/Em Spectra



Specifications

Unit Size	1 mg, 5 mg, 25 mg, 100 mg
Reactivity	Primary amine
Abs/Em Maxima	560/571 nm
Extinction coefficient	120,000 cm-1M-1
Solubility	Water, DMSO, DMF
Spectrally similar dyes	Cy3, DyLight® 555, Alexa Fluor® 555
Molecular weight	657.21
Storage Conditions	-20°C.
Shipping Conditions	Ambient temperature
